FT1DR/DE Software Update Information

Refer to the software update procedure instructions in the help files (.chm files) inside the ZIP holders.

Currently we have three different destination versions USA, AUS and EXP (including EU) of the FT1DR/DE. Please open the help file and review the information before starting the update software.

You must check the version radio you have and use the correct update software. The destination is marked on the box serial number label. See the below label example for USA destination. If the box in not available, the country you purchased the radio in may indicate the destination. If the FCC part 15 rules statement is on the radio above the Serial/ID label, it is the USA version. Other versions will not have the FCC label.

- **DST: USA** version covers North and South America [**FT1D_ver108(USA).zip**]

- **DST: EXP** and **AUS** covers all countries [**FT1D_ver108(EXP).zip**]
  (EXP version software should be installed in all units other than USA)

CAUTION:
Please be sure to confirm the model and the version of your transceiver before starting the update. Writing incorrect firmware to the transceiver may cause abnormal operation or failure.

FT1DR/DE Version 1.08

- Provides display of the received DR-1digital repeater C4FM ID on the FT1DR/DE screen (Update is only needed when used with a DR-1 repeater and System Fusion)

Note: If you already have Main **V1.08** software versions, it is not necessary to update the FT1DR again.

We hope this new software will increase your enjoyment of your FT1DR/DE. Thank you for choosing Yaesu radios. If you have any problems or questions please contact Yaesu Amateur Tech Support amateurtech@yaesu.com.
